EINPresswire.com/ -- The [Home Healthcare market](#) size is estimated to reach \$514.5 billion by 2026, growing at a CAGR of 7.1% during the forecast period 2021-2026. Unlike a skilled nursing facility, Home Healthcare provides supportive care where the

patient is living. Professional caregivers assist in the daily living of patients suffering from a disability, illnesses, or old age. Some of the common Home Healthcare devices used for treatment and monitoring of patients include Holter Monitors, Oxygen delivery systems, Wound care products, Dialysis equipment, Insulin delivery devices, infusion therapy equipment, and blood glucose monitors. The implementation of the Internet of Things (IoT) framework from the home healthcare system is anticipated to drive the market during the forecast period as it allows for real-time patient health status sharing with medical professionals as well as increased automation. However, the high production costs and low awareness in developing regions are major challenges for the home healthcare industry growth.
