

Microalgae Market Increasing Awareness of Vineyard, Winery, and Wine Tourism Advancements

PORTLAND, OREGON, UNITED STATES,
September 20, 2022 /

EINPresswire.com/ -- As per the report published by Allied Market Research, the global [microalgae market](#) was accounted for \$977.3 million in 2020, and is estimated to reach \$1.48 billion by 2028, growing at a CAGR of 5.4% from 2021 to 2028.

Rise in vegan population to strengthen product adoption, high protein concentration as compared to counterparts, multiple benefits of microalgal protein drive the growth of the global microalgae market. However, impact on spirulina production due to climate change, presence of large number of alternatives for protein and low product awareness hinder the market growth. On the contrary, technological innovations and algae protein-fortified food are expected to open new opportunities for the market players in the future.

According to the CXOs, the microalgae market is subject to steady growth in the coming years. Growth of the microalgae market is attributed to growing application of algal protein in dietary supplements and food industry, coupled with increase in adoption of nutraceuticals among general populous. However, uncertainties in climatic conditions leading to problems in algae production act as a restraint for the market growth. On the contrary, breakthroughs in microalgae production technology and rise in adoption of microalgae in the fortified food sector is expected to provide opportunities for growth for the microalgae market in the coming years.

The microalgae market size is subject to stable growth in the coming years. Growth of the market is attributed to growing application of algal protein in dietary supplements and food industry. Moreover, algal protein is not considered an animal protein source, hence is perfect for

consumption among vegan population. Furthermore, microalgae have multiple applications in cosmetics and feed industries. Both feed and cosmetics industry have experienced a surge in growth in the recent decade, which has increased demand for such products on a global level and resulted in increase in demand for microalgae. However, uncertainties in climatic conditions leading to problems in algae production act as restraint for the market growth. On the contrary, breakthroughs in microalgae production technology and growing adoption of microalgae in the fortified food sector is expected to provide opportunities for growth of the microalgae market in the coming years.

The report divides the global microalgae market on the basis of delivery mode, device, and region.

Based on type, the spirulina segment held the largest share in 2020, accounting for more than two-fifths of the market. In addition, the segment is projected to manifest the highest CAGR of 5.9% during the forecast period. The report includes an analysis of other segments such as chlorella, dunaliella salina, and aphanizomenon flos-aquae.
