

Azzawi Zahnaesthetik Helps Patients Discover the Benefits of Dental Veneers

Dental veneers specialists at Azzawi Zahnaesthetik help clients treat chipped and broken teeth and gain improved smiles and healthier teeth.

VIENNA , AUSTRIA, September 22, 2022 /EINPresswire.com/ -- There are a lot of cosmetic dentistry options available.

Each has advantages and disadvantages, from traditional braces to teeth whitening. However, only one of them can really offer an immediate transformation, and that is the installation of [veneers](#). Dental veneers have become extremely popular over time. Dental professionals often recommend them for restorative and cosmetic purposes. While the appliance is still somewhat new, it is good to know how beneficial it can be

to someone. Dental veneers offer an easy, straightforward, affordable, and effective solution to improve someone's smile. Even better, the veneer treatment is far less invasive than alternative treatments such as dental crowns, bridges, and implants.

A veneer is a thin, shell-like coating bonded over a tooth to repair and improve the appearance of a damaged tooth. Depending on the condition, a veneer changes its shape, size, length, or color. Minimal shaving of the tooth's enamel is required to allow the porcelain veneers to bond perfectly without looking too large or abnormal. Dental veneers provide an array of cosmetic benefits. People with highly stained or discolored teeth may consider placing dental veneers. Both composite and porcelain are naturally white, so other people may not even notice that a person has veneers. A visit to an expert dentist's office, such as Azzawi Zahnaesthetik in Vienna, will allow a person to compare both materials and determine which [aesthetic veneers](#) are preferred.

A tooth worn down over time may eventually present some problems. There could be weak spots or sensitivity that causes discomfort. Teeth that have been chipped or cracked may present an unattractive smile for some. Some chips and cracks are not necessarily in need of treatment, but often a person does not like the way the chipped or cracked tooth looks. Going to the dentist's office will allow a dental professional to restore the original tooth through a dental veneer. The veneer will essentially replace and restore the weak or damaged tooth. Skilled dentists at Azzawi Zahnaesthetik can help restore natural whiteness to the patient's teeth, making them look fresh and clean. They help clients achieve beautiful [gummy smiles](#) with low maintenance and stain-resistant veneers.
