Silver is a precious chemical compound that mainly finds application in manufacturing coins, jewelry, and others. It is a shiny and soft metal with the highest electrical and thermal conductivity, making it a precious commodity. It is a naturally available metal in Earth's layer, produced mainly as a resulting product of gold, copper, leads, and zinc refining.

Silver has many applications; sterling silver comprises 92.5% of silver, with the rest of the portion comprising either copper or other metals. It is extensively used in making silver tableware and jewelry furthering the silver prices worldwide.

Silver is also used in manufacturing mirrors due to its properties, such as being a reflector of visual light. It also finds application in making electrical contacts and batteries, dental alloys, and solder and brazing alloys. Silver paint is also utilized in manufacturing printed circuits.

Silver contains antibacterial properties, due to which its nanoparticles are added to clothing to control bacteria from consuming sweat leading to unpleasant odours.

The worldwide leading silver producing are China, Russia, Poland, Chile, Bolivia, Australia, Argentina, and the United States.
