

Highlights from the Construction Links Network platform this week - September 22, 2022

The only peer-to-peer content sharing platform for the construction, building and design community

SUNDRE, ALBERTA, CANADA,
September 22, 2022 /
EINPresswire.com/ -- [Construction Links Network](#) is a unique news platform where members "Get More Eyes" on their digital content and increasing their SEO.

The network includes thousands of Canadian construction managers, contractors, developers, building managers, property managers, architects, designers, engineers, government officials and more. Members use this platform to share and onboard their digital content on the Internet, through social media and our popular e-Newsletters. Ideal for product / service releases, company announcements, blogs, podcasts, webinars, case studies, videos and more.

Top news is courtesy of Construction Links Network member Procore Technologies. This week, FMI Corp. released the results of The State of Global Preconstruction Report. This report discusses the current environment for preconstruction and the characteristics of organizations that do it well, including what constitutes above-average preconstruction processes and the effects of efficient and digitized preconstruction. Procore partnered with FMI to survey 979 construction industry stakeholders worldwide.

The top video is courtesy of New Scientist as they show us how drones working together in an experiment can create 3D-printed cylinder structures made of foam or cement building

materials. In the future these 3D-printing drones could help with post-disaster reconstruction in remote areas, or even work on dangerous projects such as repairing the concrete sarcophagus at the Chernobyl nuclear plant.
