The key highlights of the report include:

Market Overview (2017-2027)

Forecast CAGR (2022-2027): 9%

The global probiotics in animal feed market is being driven by the growing need to boost the productivity of farm animals owing to the increasing demand for animal products including fish, milk, egg, and meat, among others. In addition to this, the increasing prevalence of diseases such as anthrax, pox, tetanus, and Brucellosis, among farm animals is anticipated to propel the

Animal Feed Market

demand for probiotics in the forecast period. Moreover, the increasing number of poultry farms, dairy farms, and fish farms, is likely to be a major aiding factor in the market. In terms of region, the Asia Pacific accounts for a significant share in the market owing to the favourable government policies in countries like India and China.

Industry Definition and Major Segments

Probiotics refer to live bacteria used in animal feed in sufficient amounts to stimulate the growth and health of animals such as livestock. Probiotics in animal feed are known to provide various benefits such as supporting gastrointestinal tract in animals, and supporting their health in case of diseases. Moreover, probiotics stabilise intestinal microflora and reduce the risk of pathogenic bacteria.
