

Jemz Launches the World's First & Only Chewable Teeth Whitening Treatment to Make On-the-Go Oral Care a Gettable Get

Who says having white teeth has to be painful and difficult? A new product takes the hassle out of teeth whitening just in time to show off that smile.

LAKE TAHOE, NV, USA, September 27, 2022 /EINPresswire.com/ -- White teeth, fresh breath, healthy gums. Until now, those things required numerous

contraptions like strips, gels, time-consuming bleaching, lighted trays, and dreaded dental visits that no one has ever enjoyed. But it looks like there's a new normal on the horizon. Jemz® Smile recently launched the world's first and only patented chewable teeth whitening treatment.

“

As we like to say, 'Now That's Something To Smile About!®'."

Vincent Schuman, the CEO of Jemz Labs Inc.

Launched to create a run on gorgeous smiles acquired "in-house," the product is on time to make convenience king in oral care. Gaining gleaming pearly whites just by chewing gum could be the newest shortcut to a winning grin.

"We've made something everyone wants as easy as it gets. Until now, there hasn't been a teeth whitener that's portable, discrete, and easy to use. Most importantly, they

usually cause discomfort due to sensitivity to the teeth and gums. Now, that's a thing of the past. We've solved the problems of sensitivity, portability, and efficacy with something straightforward and, dare we say, fun," said Vincent Schuman, the CEO of Jemz Labs Inc.

So, precisely what is Jemz® Smile? It's a chewable treatment that includes two pieces of gum; one piece is a whitener, and one is an activator. Chew the gum, swish the saliva, and either swallow or expel it. Then, continue to chew the gum for 10 to 30 minutes. From there, Jemz® will do the heavy lifting as it freshens breath and whitens teeth up to five shades on the first use. Used anytime, anywhere, and often, this is teeth whitening maintenance personified.

The best news yet, this product's formulation is 100% natural. Its first active ingredient is Bicolorbo-Hydroprox (BCH TM), a proprietary blend of sodium bicarbonate and hydrogen

The Jemz logo, featuring the word "Jemz" in a stylized, lowercase, blue font. The letters are rounded and have a slight shadow effect.

peroxide. Combined with xylitol, a sweetener found in plants that doesn't cause tooth decay, and silicon dioxide, the gum reduces plaque. Just by chewing the gum, specially formulated silica gently polishes the teeth and helps physically remove plaque and food debris. The company calls its unique blend something that works like a "stain vacuum" that employs novel oxidation and oral cleansing properties.

Schuman adds, "As we like to say, 'Now That's Something To Smile About!®'".

Priced at \$49.99 for sixteen treatments and shipped for free, Jemz® Smile is only available on the company's website. If purchasing two or more products, a 10% discount applies.
