The global arthritis drugs market is studied based on drug class, route of administration, sales channel, and region. By drug class, the market is segmented into disease-modifying anti-rheumatic drugs (DMARDs), nonsteroidal anti-inflammatory drugs (NSAIDs), corticosteroids, uric acid drugs, and others.

The DMARDs segment dominated the global market in 2019 and is expected to continue this trend during the forecast period. This is mainly due to the increased awareness associated with the use of DMARDs for the treatment of rheumatoid arthritis, the prevalence of rheumatoid arthritis, and the increase in obesity and overweight populations worldwide.

Asia-Pacific is expected to experience the highest growth rate during the forecast period, mainly due to increasing prevalence of rheumatoid arthritis and increasing awareness among patients

about the use of anti-rheumatic drugs. North America accounted for the largest share of the global arthritis drugs market in 2019 and is expected to remain dominant during the forecast period. This is an increase in research and development activities to develop new drugs and easy availability of arthritis drugs in the region.
