The key highlights of the report include:

Market Overview (2017-2027)

- Forecast CAGR (2022-2027): 18.6%

The sports and adventure application is expected to account for the largest share in the wearable camera market. This growth is often related to the increased usage of wearable cameras in various sports and adventure events. as an example, it's worn by sports referees and umpires in games to record play-by-play of the game being played. Moreover, it's increasingly

utilised by extreme sports enthusiasts like skydivers or underwater divers so as to record the whole experience with none hassle.

Industry Definition and Major Segments

Wearable cameras are hands-free recording devices that allow individuals to record and live stream an occasion or a situation while doing extreme sports like skydiving. It allows people to consider the task at hand with their hands and vision free, while the recording continues through the camera worn by them. Additionally, wearable cameras are utilised by surgeons to record the surgery process for later review and by enforcement officers to record any situations they encounter on duty, like traffic stops, and sobriety tests, among others. These are often worn with a belt, clipped onto the garments, and may even be worn on the top.
