

Bay-Bay Water's Purified Distilled Water Now Available in Bottles with Water Level Markers

The company that makes it safer than ever before for parents to provide purified distilled water for babies, has made the bottle more parent-friendly.

MIAMI LAKES, FLORIDA, UNITED STATES, September 23, 2022 /EINPresswire.com/ -- Representatives with [Bay-Bay Water](#) today announced that the company has upgraded the design of its purified distilled water bottle.

"We are very excited to make purified distilled water available in newly-designed bottles with water level markers," said Osmay Gonzalez, spokesperson of the company.

"The new bottle design helps parents know the amount of water remaining in the bottle to make it convenient and help them plan better," highlighted Osmay.

"Since life is constantly in motion, our distilled water is designed for easy, on the go use."

The BPA-free and phosphate-free bottles are available in [12 and 24-bottle packs](#).

"Distilled water is the purest form of drinking water on the planet," said Osmay before adding, "The purifying process occurs by boiling water into vapor and condensing it back into a liquid form. It is recommended for parents to use distilled water when mixing baby formula and cereals, to avoid an unhealthy intake of minerals. Since life is constantly in motion, our distilled water is designed for easy, on the go use."

"To ensure we provide you with the best distilled water for baby formula, our quality control checks are extremely thorough," said Osmay. "Filter inspections and change-outs are on a strict schedule. Ozone levels are checked every hour. Daily and hourly records of ozone levels and filter changes are mandatory."

Osmay went on to explain that at its production facility, the single service bottles arrive wrapped in cling film. Before the pallets of bottles leave the truck, he said, they are visually inspected to ensure no cross-contamination of any kind has taken place during transport. The pallets are stored in a secure area. Before each bottle is filled, it enters an enclosed chamber to receive a sanitizing ozone rinse. The purified water used to fill the bottles passes through a UV filter.

Bottles are capped in the filler station, not sent open to the next stage of production.
