The tele-intensive care market consists of sales of tele-intensive care by entities (organizations, sole traders, and partnerships) that refer to a telemedicine technology used in an intensive care unit (ICU) setting. Tele-intensive care is defined as remote technology that connects patients in distance intensive care units (ICUs) through real-time audio, visual, and electronic means, through which health information is exchanged from one site to another via electronic communications to track a patient's clinical health status with off-site clinical resources. In order to improve clinical outcomes in patients' health conditions remotely, it involves offering care to critically ill patients and successfully treating ICU patients.

## Global [Tele-Intensive Care Market Trends](#)

Technological advancement is a key trend gaining popularity in the tele-intensive care market. Major market players are concentrating their efforts on creating innovative technologies for healthcare systems in order to provide better and more advanced facilities to patients. For example, in August 2021, Wipro GE Healthcare, an India-based joint venture between General Electric Company and Wipro Enterprises Limited, introduced the remote monitoring solution for Tele-ICU, along with the Centricity High Acuity Critical Care Solution (CHA-CC) to connect Intensive Care Units (ICUs) in hospitals for managing and caring for patients across ICUs in a

single hospital building as well as spread across locations. This technology will help healthcare professionals provide advanced consultation and care to their critically ill patients remotely.

### Global Tele-Intensive Care Market Segments

The global tele-intensive care market is segmented:

By Type: Centralized Models, Decentralized Models, Others

By Component: Hardware Computer System, Software

By Type of Management: Intensivist, Open, Co-Managed, Open with Consultant, Others
