EINPresswire.com/ -- The global [tactile sensor market](#) is forecast to reach USD 21.98 Billion by 2028, according to a new report by Reports and Data. The tactile sensor work as the adoptive sensing technology, which accumulates

and provides feedback in response of the physical interaction. These sensors basically work as the cutaneous sense and the kinesthetic sense in the human body. The advanced adaptive tactile sensing technology can be sensitive to both the dynamic and static forces and is capable of measuring the internal and external state of systems. The rising requirement of the robotics technology in different sectors and an increase in the practice of machine learning and its research and development are helping in the market growth highly. Capacitive & axial array sensors will likely be in high demand during the forecast period.

APAC is forecasted to achieve the fastest growth of about 18.9% in the period 2019 – 2026, due to its extensive growth in the consumer electronics products market coupled with the massive demand for this sensor in the electronic gadgets and appliances manufacturing industries.
