Surface Disinfectant Market Size Report 2022-2027

Industry Overview:

A surface disinfectant involves physical and chemical methods used to inactivate pathogens and reduce the number of pathogenic microorganisms on inanimate surfaces, such as medical equipment, floors, walls, washrooms, tiles, furniture, and tabletops. It is a form of decontamination that works by destroying the cell wall of microbes and interfering with their metabolism. A surface disinfectant is widely used across hospitals and residential and commercial complexes to prevent the spread of bacteria from person to person or object to object. The practice also helps maintain good hygiene in the workplace and reduces the number of illnesses across the workforce. The commonly used surface disinfectant includes alcohols, sodium hypochlorite, chlorine and chlorine compounds, hydrogen peroxide, formaldehyde, glutaraldehyde, iodophors, peracetic acid, phenolics, and quaternary ammonium compounds.

The recent COVID-19 outbreak has compelled governments across the globe to mandate the use of disinfectants in sterilizing medical facilities, equipment, and entire hospital premises, which is one of the primary factors providing a considerable thrust to the market. Besides this, the increasing surgical procedures and the growing cases of [hospital-acquired infections](#) (HAIs) due to contamination are creating a positive outlook for the market. Additionally, key market players are launching environmentally friendly product variants that are non-toxic, easy to use, and cost-effective, which is bolstering the market growth. Other factors, such as the surging use of surface disinfectants in non-healthcare settings and increasing consumer awareness regarding hygiene, are propelling the market growth.
