

Forward Thinking Systems Adds Low-Power Mode and Remote Wake to FleetCam

JERICO, NY, UNITED STATES,

September 28, 2022 /

EINPresswire.com/ -- Forward Thinking Systems is proud to announce the addition of low-power mode and remote wake to its FleetCam features. This new functionality will allow users to access FleetCam even when their vehicles are turned off.

FTS Logo

With this update, users can now download footage from a historical event or live stream without having to start up the vehicle. Low-power mode prevents the cameras from excessively draining the vehicle battery. Additionally, in the event that low battery voltage is detected, safety measures have been added to ensure the camera powers down completely.

"Remote wake and low-power mode are a game changing new feature," says David Isler, CEO of Forward Thinking Systems "The cameras are now accessible even when the vehicle is off. Live streaming and video footage collection just got way easier."

How It Works

If a video or live stream is requested, a message is sent to wake the camera. The camera then proceeds with the requested action. Once the action is completed, the camera returns to low-power mode.
