Black pepper, or peppercorn, is an aromatic, hot-tasting, small size spice produced from the unripe fruits of a green, wide-leafed, flowering vine belonging to the Piperaceae family. It is picked and processed after determining its ripeness, depending on type and strength. Black pepper is a rich source of vitamins, carotenes, flavonoids, manganese, and other antioxidants that cure neuralgia, scabies, stomach infections, bronchitis, and vitiligo. Apart from this, black pepper exhibits anti-inflammatory properties and can provide relief from colds and coughs. Consequently, It is extensively used as a spice in culinary practices for cooking various recipes, such as meats, fish, eggs, salads, and soups.

Market Trends and Drivers:

The widespread adoption of black pepper as an essential ingredient in the food and beverage

(F&B) industry for preparing various ready-to-eat (RTE) meals and confectionery and bakery products are primarily driving the market growth. Moreover, the popularity of clean-label fast-moving consumer goods (FMCG) products and the growing consumer awareness regarding the harmful effects of synthetic additives have fuelled the demand for organic and ayurvedic spices, which is favoring the market growth. Additionally, the extensive incorporation of black pepper in skin and hair care products due to its antioxidant and antiseptic properties are propelling the market growth. Besides this, black pepper possesses piperine that ensures chemoprevention, detoxification, and bioavailability of nutrients and drugs; therefore, expanding their employment in the pharmaceutical sector.
