“

Doctors of Bangladesh will be benefitted and will take the specialty of pain medicine ahead in Bangladesh.”

*Dr. Gautam Das*

Interventional pain management is a newer branch of modern medicine where the pain is managed with minimally invasive procedures in different intractable chronic painful conditions like knee pain, back pain, shoulder pain, cancer pain, nerve pain, etc. Many of these pains were difficult to manage with conventional medical management and there was the possibility of intractable side effects of pain killers.

Pain is carried by fine pain-carrying nerves, which can be identified with ultrasonography or fluoroscopy and can be ablated with radiofrequency. These nerves don't have other major functions like movement, feelings of touch, etc., so there is no harm in ablation of these nerves. Cooled radiofrequency is a similar, but a more advanced procedure. These are the most modern option to take care of pain and finer skills are needed to learn these procedures. A cadaveric

workshop is the best option to learn these interventional procedures for pain management and at Dhaka Medical College cadaveric workshop was organized for skill development.

37 doctors from Bangladesh participated in this cadaveric workshop. At the inaugural ceremony, of the cadaveric workshop, the secretary general of BSACCPP told that "This is the first cadaveric workshop for pain procedures in Bangladesh and 2nd cadaveric workshop among all medical specialty in Bangladesh." Dr. Jamil Sabit told that "This is a rare opportunity and all participants should utilize this opportunity and learn best." Dr. Gautam Das who was the patron of this workshop told that "Daradia is always working for spreading knowledge in pain medicine and regularly organizing different training courses.

International Conference on Recent Advances in Pain ([ICRA-PAIN](#)) is organized every year by Daradia for this purpose in different cities of India. This time 7th ICRA-PAIN is organized jointly with BSACCPP and the cadaveric workshop was a part of the conference." He expected that
