The data center renovation market consists of sales of data center renovation services by entities (organizations, sole traders, and partnerships) that are used for the purpose of storing, processing, and disseminating data and applications by the organizations' shared IT operations and equipment. Data center renovation refers to the collective set of processes used to physically construct a data center facility. It combines data center operational environment requirements with construction standards. A data center renovation project charter can help to establish a clear and defined project scope, decision rights, and executive sponsorship for the project, as well as identify any potential risks that could hinder project performance.

[Global Data Center Renovation Market Trends](#)

Surging investments in research and development activities is the key trend gaining popularity in the data center renovation market. The key market players in the industry are focusing on investing in the research and development of various technologies and processes for renovating data centers to sustain their position in the market.
