Overview Of The Dispersant Polymer Market

The dispersant polymer global market consists of sales of dispersant polymer by entities (organizations, sole traders, and partnerships) that are used to improve the dispersion stability of suspended solids in water. The dispersant polymer refers to low molecular weight anionic polymers with anionic functional groups. The anionic functional group gives a negative charge and the hydrocarbon chain of polymer gives surface to a dispersant molecule. A dispersant molecule is a specially crafted polymer that must meet four standards: sufficient negative charge, the ability of the functional group to ionize or deprotonate in water into ions, controlled molecular size or molecular weight, and the right choice of a functional group to provide necessary charge density so that repulsive forces between the molecules can overcome mutual
