Electrocardiography is a device mainly used to detect and monitor the tiny electrical impulses generated by the sinoatrial node (SA) in the heart to pump the blood around the body. It is used to monitor the pace using the wires placed on the trunk. The number of methods used varies depending on the type of ECG used. The revenue for the South Korean ECG market is expected to increase significantly over the next four to five years. The main factors driving the growth of South Korea's electronics market are the increasing geriatric population, improving medical facilities, the number of patients suffering from heart disease and increasing health expenditure per capita.
