Factors driving the growth of the digital health market include the rise in chronic diseases such as hypertension, cancer, cardiovascular disease, and diabetes; growth in the aging population; Advances in technology in the healthcare sector and the demand for healthcare have increased. For example, according to the American Heart Association, more than 100 million Americans had high blood pressure in 2018.

Patients with high blood pressure need to have their blood pressure monitored at regular intervals to reduce the risk of stroke and heart attack. Market players are focusing on developing new approaches for the use of digital health technology. Furthermore, in 2020, Sensine Health, a clinical AI technology company, launched GDm-Health, which will provide a remote monitoring solution for gestational diabetes patients.

Digital health market is expected to grow due to increase in prevalence of cardiovascular disease, increase in demand for healthcare software and increase in number of internet users.

Additionally, the growing demand for remote monitoring services has led to the development of innovative technologies in the healthcare sector, fueling the market growth.
