The DNA-based skincare products market consists of sales of DNA-based skincare products by entities (organizations, sole traders, and partnerships) that are used to clean the skin, preserve the moisture balance of the skin, stimulate skin metabolism, and protect the skin from harmful ultraviolet radiation. DNA skincare products use information gathered from the person's genetic makeup to prescribe the products, which helps in knowing the adverse effects of routine to counteract. These skincare products recommend remedies based on information acquired from genetic composition, as well as a routine to combat any negative consequences.

[Global DNA Based Skin Care Products Market Trends](#)

Technological advancements have emerged as one of the key DNA based skin care products market trends gaining popularity. Major players operating in the DNA-based skin care products sector are focused on launching new technologies for market growth. For instance, Caligenix, a US-based NextGen precision health biotech company, launched genomic-based wellness brands named Dermatyp and Biotyp. By using AI (artificial intelligence) algorithms, genomic

technologies, and diagnostic tests, they are matched to people's unique genomic DNA. Dermatype is a complete skincare solution that includes product matching, a skin DNA test, and facial analysis powered by AI.

[Global DNA Based Skin Care Products Market Segments](#)

The global DNA based skin care products market is segmented:
