

Socks Manufacturing Project Report 2022: Plant Cost, Business Plan, Raw Materials 2027 | Syndicated Analytics

The rising number of working professionals and the emerging trend of formal attire at the workplace are among the key factors driving the socks market.

ALBANY, NEW YORK, UNITED STATES, October 4, 2022 /EINPresswire.com/ -- Socks refer to the pairs of knitted or woven coverings worn to prevent the rubbing of shoes on bare feet. They are made using various materials, including cotton, wool, nylon, acrylic, polyester, olefins, spandex, bamboo, linen, cashmere, mohair, silk, etc., which are utilized based on individual requirements and weather conditions. Some sock variants, such as diabetic socks, help alleviate symptoms associated with diabetes, such as reducing rough abrasion and shear forces on the skin. Others, such as thermal socks, are used in cold environments to keep the foot warm and prevent frostbite.

The rising number of working professionals and the emerging trend of formal attire at the workplace are among the key factors driving the socks market. Moreover, the inflating popularity of sports as a career option among individuals is propelling the demand for compression socks, which are usually worn during outdoor activities to increase oxygen delivery and reduce jarring, vibration, and stress to the muscles. Besides this, the escalating prevalence of diabetes and the growing awareness towards the negative impact of diabetes on the feet of patients are also augmenting the global market. Furthermore, the development of product variants that can track the temperature, movement, and location of infants is expected to bolster the socks market over the forecasted period.
