Perspective, Comprehensive Analysis, and Forecast, 2018–2025". According to the report, the global healthcare business intelligence (BI) market was approximately USD 4,239 million in 2018 and is expected to generate around USD 10,117 million by 2025, at a CAGR of around 13.23 % between 2019 and 2025.

According to a recent study, big data and BI could cumulatively save up to USD 300 to 400 billion annually. Healthcare providers use BI software to gain insights into patient satisfaction and take financial decisions based on

their findings. The adoption of BI leads to better organizational quality, which leads to improved patient outcomes. BI also helps in disease prevention for the facility's patients.
