An allergy is a condition induced by the immune system's hypersensitivity to normally harmless substances in the environment, which are referred to as allergens. Dust mites, mold, tree weed, grass pollen, milk, egg, soy, wheat, and other aeroallergens are types of allergies. These allergens can induce hay fever, allergic rhinitis, asthma, atopic dermatitis, and other allergic disease disorders. Itching in the nose, roof of mouth, throat, or eyes, as well as sneezing, stuffy nose (congestion), teary eyes, and other symptoms, are all common indications of allergic reactions. Furthermore, food allergies can result in symptoms such as vomiting, diarrhea, or respiratory problems when an allergen is consumed.

Drivers

Increasing prevalence of various forms of allergies

The rising prevalence of various forms of allergies is estimated to enhance the market's growth. According to a research published in 2020 by the Food Allergy Research and Education Foundation, 32 million Americans were suffered from food allergies, including 5.6 million

children under the age of 18. Approximately 40% of children with food allergies are allergic to many foods.

Increasing investment for healthcare infrastructure

Another significant factor influencing the growth rate of allergy treatment market is the rising healthcare expenditure which helps in improving its infrastructure. Also, various government organizations aims to improve the healthcare infrastructure by increasing funding and this will further influence the market dynamics.

Growing number of geriatric population

The surging geriatric population is estimated to enhance the market's expansion during the forecast period of 2022-2029. According to the World Health Organization (WHO), the worldwide geriatric population, which was estimated to be over 524 million in 2010, is expected to increase to nearly 2 billion by 2050. Due to their compromised immune systems, geriatrics are more susceptible to get types of allergies, further estimated to enhance the market's growth rate.

Surging incidences of asthma

The growing incidences of asthma is estimated to propel the market's growth rate during the forecast period pf 2022-2029. Asthma and dietary allergies frequently coexist. Both food allergy and asthma symptoms are more likely to be severe when this happens.

Furthermore, rising initiatives by public and private organizations to spread awareness will expand the allergy treatment market. Additionally, changing lifestyle of people and growing investment by manufacturers on the development of novel allergic treatments will result in the expansion of allergy treatment market.

Opportunities

Increase in the number of research and development activities

Moreover, the market's growth is fueled by an increase in the number of research and development activities. This will provide beneficial opportunities for the allergy treatment market growth. Along with this, rising drug approvals and launches will further propel the market's growth rate.

Major Points Covered in Table of Contents:

An Overview of the Allergy Treatment Market Industry

Manufacturers' Market Share Production Market Share by Regions

Consumption in Different Regions

Trends in Production, Revenue, and Price by Type

Analysis of the Allergy Treatment Market by Applications

Allergy Treatment Market Industry Company Profiles and Key Figures Allergy Treatment Market Manufacturing Cost Analysis

Customers, Distributors, and Marketing Channel

Market Trends

Research Findings and Conclusions on the Allergy Treatment Market
