

# Sphaera, Inc. Successfully Completes An 80,000 Sq Ft. Facility Decommission, Migration & Custom Fit-up Project, Portland

*The project featured decommission & migration of a \$1.5 billion automotive data management solutions company's office space, engineering lab, and data center.*

HILLSBORO, OREGON, UNITED STATES, October 6, 2022 /EINPresswire.com/ --

Sphaera Inc., a trusted IT infrastructure management company, is pleased to announce the successful completion of a decommission, migration, and

custom data center fit-up project in Portland, OR. This large-scale project involved migration, certified data destruction, application & systems migration, and facility build-out for a \$1.5 billion multinational Automotive Data Management Solutions (DMS) company.

The multinational client needed to decommission its 80,000 sq. ft. office space, engineering lab & data center in Portland, OR, and relocate critical services to a smaller location, and complete custom fit-up/build-out of the new facility.

The CIO of the \$1.5 billion-multinational client commented: "In January 2022, we faced a time-constrained challenge to decommission and exit two floors (approximately 80,000 square feet) of a building that we had been tenants in for 20 years. We also needed custom build services as we looked to relocate critical services across town to a smaller office. We truly appreciate the talent, planning, and commitment of the Sphaera team. They managed all logistics coordination with our project managers, external vendors, city government, and internal departments, including real estate, IT, facilities, and legal. By May 2022, they had the engineering lab moved, including all hardware, equipment, and applications, ensuring the successful completion of the project, on budget and on time. I highly recommend Sphaera for IT & critical infrastructure migration and decommission work!"
