Bulbospinal muscular atrophy (Kennedy's disease) is a disease under which bulblike structure forms in the lower part of the brain that contains nerve cells controlling muscles in the face, mouth and throat. The condition occurs due to loss of nerve cells in the brain stem and spinal cord, this result in stoppage of messages from brain to muscles for movement. The patients suffering with this disease have difficulty in speaking, standing, walking and controlling their head movements. In worse condition patients can have trouble swallowing and breathing. This disorder mainly affects men and does not occur in females, who are protected by their low levels

of testosterone in the body, accounting for the sex-limited inheritance pattern of this disorder.
