Key Trends In The Rugged Display Market

Development of innovative new displays is a key trend gaining popularity in the rugged display market. For instance, in 2019, DT Research, a US-based multinational company that develops and manufactures information appliances including rugged mobile computing devices, launched two new rugged tablets named DT380CR and DT380Q, which are specially designed for military applications and weigh less than two pounds with large screens and high brightness. Through high brightness, outdoor viewable screen with capacitive touch, the tablets' 8-inch display finds the readability sweet spot for employees in a range of circumstances. With a built-in 2D barcode scanner and 5 megapixel rear camera, or a 3D Intel RealSense™ Depth camera, capturing and transferring data is straightforward.

[Overview Of The Rugged Display Market](#)

The rugged display market consists of sales of rugged display products by entities (organizations, sole proprietors, partnerships) that are used in multi-platform situations, including shipboard, airborne, and ground mobile design. Rugged displays are suited for use in difficult operating conditions such as scorching hot or freezing cold temperatures, significant dust and water

exposure, and explosive atmospheres. Advanced lamination and glass are used in rugged displays to improve durability, brightness and contrast, and sunlight readability while lowering reflection, condensation, and dust buildup.
