The report also includes competitor and regional analysis, and contemporary advancements in the market.

The global aerosol cans market size reached US\$ 11.9 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 14.8 Billion by 2027, exhibiting a growth rate (CAGR) of 3.4% during 2022-2027. Aerosol cans refer to self-contained and handheld dispensers or containers that spray out liquid particles in the form of a fine mist, spray, or foam. They consist of a shell, valve, dip tube, a mixture of the liquid product and liquefied-gas propellant, etc. As the valve opens, the product moves up via the dip tube and is vaporized into fine particles by the propellant. Aerosol cans are generally produced using aluminum, steel, plastic, etc. These containers assist in protecting the contents from light, air, humidity, gases, micro-organisms, etc. As compared to other packaging formats, aerosol cans are hermetically sealed, more convenient to use, have multi-layered laminations, etc. Consequently, they find extensive applications across various industries, including agriculture, automotive, food and beverage (F&B), etc.

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Global Aerosol Cans Market Trends:

The widespread adoption of personal care products, such as deodorants, body mists, face mists, shaving foam, hair sprays, etc., is primarily driving the aerosol cans market. Additionally, the growing utilization of spray paints for personalized designs on automobiles is further catalyzing the market growth. Besides this, the increasing consumer awareness towards the recyclability and reusability of aerosol cans is acting as another significant growth-inducing factor. Moreover, the escalating demand for fast-moving consumer goods (FMCG) is also positively influencing the global market. Apart from this, the introduction of environment-friendly, cost-effective, and energy-efficient product variants that are manufactured using aluminum is anticipated to fuel the aerosol cans market over the forecasted period.
