

Building Vibration Isolation Market Experienced Noteworthy Growth At A CAGR Value of 5.5% by 2028

The report aims to deliver an in-depth outline regarding the trends and market development scenario to outpace the global market with relevant strategies.

NEWARK, UNITED STATES, October 12, 2022 /EINPresswire.com/ -- As per the research, the global [building vibration isolation market](#) is expected to grow from USD 1.8 billion in 2020 and reach USD 2.91 billion by 2028, growing at a CAGR of 5.5% during the forecast period 2021-2028.

The building vibration isolation market is witnessing significant growth from the past years. This growth is attributed to increasing urbanization leading to a spike in residential infrastructure due to the population migrating to urban areas. The change in demand for residential and commercial buildings has caused a surge in the building vibration isolation market. The leading market players are investing in research & development to build vibration isolation innovations with enhanced properties. Several companies & businesses are aiming to provide building vibration isolation systems for the railway, construction, and industrial sectors.

The vibration control solution or building vibration isolation systems are employed to support building structures and buildings with the aim to provide immunity from vibrations and low-frequency ground-borne noise generated by external sources like underground railways.

Building vibration isolation systems function to achieve the superior combined system performance of structural integrity, vibration control & buildability, and load-bearing capacity. The dense closed-cell foams, laminate materials, and elastomer pads are utilized under common household items, under high-performing audio systems, in vehicles, and heavy machinery. The building vibration isolation system is extensively used by end-users such as industrial, residential, and commercial.

The increasing product demand from the commercial and residential sectors has triggered the market for building vibration isolation. The significant penetration of building vibration isolation systems in the Asia-Pacific region has created newer opportunities for the market. The spike in the need for green building and energy-efficient products paired with the rising commercial & residential constructions has accelerated the adoption of building vibration isolation. The

increasing investments in new construction and renovation or redevelopment of old buildings require building vibration isolation to guard the infrastructure against high-frequency vibration and noise. The rise in new construction sites & businesses has resulted in growth for building vibration isolation solutions. These are the factors driving the global building vibration isolation market. The factors such as lack of awareness of the product's availability and lack of penetration in developing nation markets are restraining the global building vibration isolation market.

Some notable players in the building vibration isolation market are KRAIBURG, Getzner, VibraSystems Inc., Regupol BSW GmbH, Acoustic Control Engineers, Farrat, Mason Industries Inc., GMT Rubber Metal Technic Ltd., Vibrant Eliminator Co. Inc., and Endine Inc. To gain a significant market share in the global building vibration isolation market, the key players now focus on adopting strategies such as product innovations, mergers & acquisitions, recent developments, joint ventures, collaborations, and partnerships. Getzner and KRAIBURG are some of the key manufacturers operating in the building vibration isolation market.

Resin-bonded cork & recycled rubber segment dominated the market and held the largest market share of 31% in the year 2020

On the basis of material, the global building vibration isolation market is segmented into resin bonded cork & recycled rubber, resin bonded recycled rubber, virgin polyurethane, and cork & natural rubber engineered compound. The resin bonded cork & recycled rubber dominated the market and held the largest market share of 31% in the year 2020. This growth is attributed to several advantages of building vibration isolation, such as long-term durability, high damping, recycled products, high vibration isolation, etc. Because of the properties, resin bonded cork & recycled rubber is widely used in restaurants, gyms, office spaces, hotels, and residential homes.

Pads/Mats segment dominated the market and held the largest market share of 46.1% in the year 2020

On the basis of form, the global building vibration isolation market is segmented into blocks, modules, and mats/pads. The mats/pads dominated the market and held the largest market share of 46.1% in the year 2020. This growth is attributed to the extensive use of pads/mats in various commercial and industrial applications due to its easy installation, exceptional performance, effectively controls the resonant vibration and structure-borne noise.

Residential segment dominated the market and held the largest market share of 43.3% in the year 2020

On the basis of end-use, the global building vibration isolation market is segmented into industrial, residential, and commercial. The residential dominated the market and held the

largest market share of 43.3% in the year 2020. This growth is attributed to the surge in residential construction because of a hike in urbanization. The growing world population is leading to a greater need for residential infrastructure, and hence, developers are constructing buildings in any available profitable land.

Regional Segment of Building Vibration Isolation Market

North America (U.S., Canada, Mexico)

Europe (Germany, France, U.K., Italy, Spain, Rest of Europe)

Asia-Pacific (China, Japan India, Rest of APAC)

South America (Brazil and Rest of South America)

Middle East and Africa (UAE, South Africa, Rest of MEA)

On the basis of geography, the global building vibration isolation market is classified into North America, Europe, Asia-Pacific, Middle East & Africa, and South America. Asia-Pacific region held the largest market share of 25.16% in the year 2020. This growth is attributed to increased demand for building vibration isolation because of rising awareness regarding the product and its benefits. The government has taken initiatives to promote building vibration isolation in stringent government norms and subsidies.

About the report:

The global building vibration isolation market is analysed on the basis of value (USD billion). All the segments have been analysed on a global, regional and country basis. The study includes the analysis of more than 30 countries for each segment. The report offers in-depth analysis of driving factors, opportunities, restraints, and challenges for gaining the key insights of the market. The study includes porter's five forces model, attractiveness analysis, raw material analysis, and competitors' position grid analysis.
