Global burn care market was valued at USD 2.2 billion in 2021 and is expected to reach USD 3.99 billion by 2029, registering a CAGR of 7.4% during the forecast period of 2022-2029. The 🔥thermal burns🔥 accounts for the largest burn type segment in the burn care market within the forecasted period owing to the high incidence of fire-related burn injuries. The market report curated by the Data Bridge Market Research team includes in-depth expert analysis, patient epidemiology, pipeline analysis, pricing analysis, and regulatory framework.

Burns are injuries caused by heat exposure, which can be electrical, chemical, electromagnetic or thermal energy. The severity of a burn damage is determined by its size and depth. First-degree, second-degree, and third-degree burns are the three forms of burns. The severity of the burn damage determines how it is treated. Burn care items are used to relieve pain, minimize the risk of scarring, remove dead tissue, prevent infection, and restore function.
