Personal Emergency Response Systems allow to quickly call for assistance in case of an accident or medical emergency without turning on the cell phone. A personal emergency response system has three parts: an integrated radio transmitter, an answering console attached to the phone, and a central call center that monitor all calls made. The system works with a triangulation algorithm to determine the best location for receiving signals. The process is accurate, and personal emergency response systems can even direct dispatchers to the location when a personal emergency comes up.
