

# DataParser supports new features in Zoom, Slack and Webex

*New versions of DataParser for Slack, Webex and Zoom are now available.*

MILLBROOK, NY, UNITED STATES, October 13, 2022 /EINPresswire.com/ -- 17a-4's [DataParser](#), the leading independent connector solution to collect and format third party data for archiving and eDiscovery, continues to add features to major interfaces. Slack, [Webex](#) and [Zoom](#) modules have all been updated to include the last features and releases. As data source partners, like Zoom, Salesforce and Cisco enhance their platforms with new features, 17a-4 is committed to providing support.

“Compliance teams need to manage feature rollouts on platforms their using to conduct business. If content from chat and collaboration platforms cannot be captured, Compliance can’t signoff and users are restricted from using new features. Our goal is to capture all the content so DataParser clients can use the latest features on their chosen platform.” said Charles Weeden, Managing Partner of 17a-4.

Our goal is to capture all the content so DataParser clients can use the latest features on their chosen platform.”

*Charles Weeden*

17a-4 works closely with integration partners to keep in step with new features. DataParser engineers have streamlined the development and testing of new features

to ensure continuous updates. DataParser is deployed for small, mid-size and Enterprise clients with global deployments capturing millions of messages a day. DataParser’s testing and support teams work closely with client IT and Compliance teams to help manage feature testing and rollouts.

DataParser is an independent solution that supports delivery to multiple locations including Microsoft 365, EV, Proofpoint, Mimecast, Archive360, Cryoserver and many other archive and

eDiscovery platforms. Supported data sources include Zoom, Webex, Microsoft Teams, Slack, Symphony, Yammer, SharePoint and more. Data types include chats, meetings, documents, data feeds, collaboration platforms and databases. DataParser has no impact on the collected data source networks or destination archives. Users' chat and collaboration activities are not disrupted by the DataParser's processes and Compliance officers do not have to make changes to eDiscovery procedures. All ingested data sources are fully indexed and searchable via typical eDiscovery queries in the archive or eDiscovery platform.

DataParser is a modular software solution designed to meet Compliance, Legal, Security and IT requirements. On-premise and cloud plans are available. For more information about the upcoming DataParser releases visit [17a-4.com](http://17a-4.com).

#### About 17a-4 LLC:

17a-4 is a compliance services and software company with a focus on solutions to meet regulatory and e-discovery needs of institutional clients. Clients leverage 17a-4's expertise to ensure information infrastructures comply with SEC (Rule 17a-4), FINRA and CFTC (Rule 1.31) regulations. 17a-4 services include Designated Third Party, Books & Records audits, Archive Reviews and assessments of compliant architectures.

17a-4's DataParser is the leading independent middleware connector solution for messaging compliance. DataParser offers on-premise and hosted cloud plans; deployed globally managing enterprise communication systems. 17a-4's eDisclaimer is a hyperlinked messaging disclaimer service for compliance with regulatory requirements and legal protection for corporate messaging. PostLog is 17a-4's service to capture, format and forward the Twitter and YouTube data into any archive. 17a-4's architecture provides for a single-point in which all e-messaging content may be managed for retention, legal and regulatory holds and e-discovery productions.

17a-4 is based in New York.
