The Steinberg Law Group has decades of experience in handling mesothelioma and other asbestos-related cases. With offices in New York, California and Texas, the Steinberg Law Group has a national footprint that helps win the best possible financial compensation for clients. [www.mesotheliomaoptions.com/contact](http://www.mesotheliomaoptions.com/contact)

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2022 were exposed decades ago. Although Iowa has no known naturally-occurring asbestos, the state's economy has largely centered around businesses with a long history of asbestos use. Iowans are at an increased risk of asbestos exposure due to the state's geographic location in the heart of tornado alley because natural disasters can disturb asbestos products, exposing residents to the deadly substance decades after construction. As a result, much rebuilding in Iowa should be done in conjunction
