Empty Capsules Market Study

## Empty Capsules Market Overview:

Capsules are the second most common form of dosage for the oral administration of drugs after tablets. These are largely used in the nutraceutical and pharmaceutical sectors. Reduction in the timelines of drug development under standard conditions has been the key factor driving the production of drugs delivered in the form of capsules among pharmaceutical and nutraceutical manufacturers. In addition, this strategy enables pharmaceutical manufacturers to reduce the time required to introduce the drug in the market. The other advantage includes protection of a drug substance from various external factors, such as natural or artificial light during production, storage, administration, and use. Furthermore, capsules act as an efficient shield, which prevents the enclosed drugs from decomposition.
