

# All Year Cooling and Heating of Coral Springs, Florida Offers Options That Benefit Consumers by Inflation Reduction Act

CORAL SPRINGS, FLORIDA, UNITED STATES, October 16, 2022

[/EINPresswire.com/](https://EINPresswire.com/) -- Tax credits for energy-efficient home improvements are extended and expanded by the Inflation Reduction Act. All Year Cooling and Heating of Coral Springs, Florida offers a wide range of services and products that will help clients capitalize on the benefits of the Inflation Reduction Act. For consumers planning home improvements that will boost the energy efficiency of their houses, they may save some money on their projects under the Inflation Reduction Act, which was signed into law in August. One of the bill's main goals is to address climate change and slow down global warming. While the new law primarily helps businesses adopt more eco-friendly measures and jumpstart clean energy production, there are incentives for ordinary Americans to go green and save some green, too.

All Year Cooling and Heating of Coral Springs, FL will help consumers to take advantage of numerous tax breaks for homeowners and home buyers. For instance, homeowners can cut their tax bill even more if they install new energy-efficient windows, doors, water heaters, furnaces, or air conditioners. The legislation extends and enhances two tax credits that reward "green" upgrades

All Year Cooling is South Florida's #1 Choice for Same Day AC Service & Installation

to homes. Other tax breaks include the purchase of electric vehicles and a revived tax break for installing EV recharging equipment at home. Energy Efficient Home Improvement Credit—one of the tax credits with which homeowners may be familiar are: the Nonbusiness Energy Property Credit. This credit ended in 2021; however, the Inflation Reduction Act resurrects it and improves it substantially, rebranding it as the Energy Efficient Home Improvement Credit.

Starting in 2023, the credit will be equal to 30% of the costs for all eligible home improvements made during the year. It will also be expanded to cover the cost of certain biomass stoves and boilers, electric panels and related equipment, and home energy audits. Roofing and air circulating fans will no longer qualify for the credit, though. Some of the energy-efficiency standards will be updated as well. In addition, the \$500 lifetime limit will be replaced by a \$1,200 annual limit on the credit amount (the lifetime limit on windows will go away, too). If a consumer were to spread out their qualifying home projects, they could claim the maximum credit each year. There are limits on the amount certain families can get, though. For instance, a rebate can't exceed 50% of the cost of a qualified electrification project if the family's annual income is between 80% and 150% of the area median income. Each qualifying family will also be limited to no more than \$14,000 in total rebates under the program.
