Diatomaceous Earth, also known as diatomite, is a naturally occurring siliceous and sedimentary rock. It is white, brittle, and can be easily ground into a fine powder. There will be an increase in demand for filtration tools, fillers, and abrasives. Increased demand from the chemical industry for filtration aids in increasing fluid flow and filtering extremely small particles that can clog filter papers. Market growth is anticipated due to the increased use of pesticides because of their physical-sorptive qualities and abrasive-like nature.

Diatomite is 90% silica. Silica is a lung cancer-causing agent and can cause lung damage. This will likely limit the market growth.
