Insect offers high-quality protein, amino acids, and vitamins for livestock as well as pet food. Insect based diet for livestock can potentially replace soymeal in their diet. The nutritious quality of fly larvae, meal worms, silkworm, locusts, among others are used in the diets of pigs, poultry, aquaculture, and ruminants. These insects offer 42%-63% higher protein content compared to traditional resources such as soymeal and fishmeal. Also, the palatability of insect feeds is higher and can replace 25 to 100% of soymeal and fishmeal depending on the animal for which it is being used.

The increasing Insect Feed Market Demand for poultry products from the food service industry majorly drives the Insect Feed Market Growth. Improvements in breeding techniques for the development of environmentally low-impacting livestock, further contribute toward market growth. A healthy gut reflects the sufficient amount of protein is being consumed by the animal. Protein is required for healthy metabolism as well. Protein deficiency reduces productivity among animals. Thus, through the consumption of insect feed protein deficiency can be overcome. This factor will fuel the growth of the insect feed market during the forecast period. Moreover, the identification of insects as a more sustainable source of proteins than traditional

sources will further contribute toward the market growth and is likely to bring myraid Insect Feed Market Opportunity.

However, the availability of alternative feed options such as corn meal, soy meal, canola meal, whey meal limits the growth of the insect feed market. Also, poor knowledge associated with risks related to insect toxicity, nutritional quality, diseases, and allergic reactions among animals is likely to hamper the growth of the market.
