Key findings:

- The COVID-19 pandemic has impacted numerous agrosystems and associated livelihoods across the globe, with continued and knock-on effects anticipated in the coming months and years.
- Furthermore, the pandemic hit just as harvest activities were beginning. Impacts were felt all along the value chain, from farmer to buyer.
- After opening of lockdowns, the COVID-19 crisis is expected to have a significant positive impact on the growth of the plant tissue culture market across the globe.

Based on growth container type, the glass bottles segment was the major revenue contributor in 2020 and is expected to remain dominant during the forecast period. Glass bottles are suitable for tissue culture because their lids seal them off from the outside environment.

Depending on plant type, the annual plant segment led the market in 2020, and is projected to maintain its lead over the forecast period, owing to its fast-growing nature that develops more

vigorous plants.

By end use, the agriculture segment dominated the market in 2020 and is expected to continue this trend over the forecast period. Growing demand for plant tissue culture in agriculture Plant tissue culture is becoming increasingly popular in agriculture as an approach to commercialize the problem of food scarcity in underdeveloped countries and address their rapidly growing populations in a limited way. Thus, the land sector is driving the growth of the market.
