

Speitcoinus Uses Node Trading as An Entry Point to Create More Value for Second-Contract Investors

GREENWICH, CT, UNITED STATES, October 19, 2022 /EINPresswire.com/ -- Against the backdrop of the development and rise of new forms of currency, the concept of digital currencies is being promoted and developed, and it is gradually coming into the public eye. Investors from all over the world flock to invest and cash in on the rising prices of digital currencies and reap huge gains. As digital currencies have become a standout in the global financial market, digital asset exchanges have grown exponentially. The Contract exchanges, have attracted countless digital asset enthusiasts worldwide because of their unique attributes such as the ability to buy up and buy down and up to 100 times leverage, which allows participants to earn high returns regardless of ups and downs.

As the trading market has matured, digital currency trading has also extended towards finer vertical markets, of which second-contract is getting a lot of attention.

"This is the newest way to play since options, a novel model that allows players to truly experience the thrill of second-contract." said the head of

Speitcoinus Plan

Speitcoinus Office

[Spebitcoinus](#). Spebitcoinus, as a top global platform, is creating more opportunities for users in the second-contract market. For example, we are helping users earn profits with second-contract node trading. Spebitcoinus' powerful technology comes from world-class financial experts with more than ten years of experience in blockchain, making transactions more secure and convenient for users. Users don't have to worry about the security of the coins, trade with one click, play with the contracts freely and are loved by USAIntelFund investment companies. Website: spebitcoinus.com

It is reported that second-contract is currently a relatively simple way to trade. Specifically, users on the Spebitcoinus platform first need to choose the digital currency to be traded (such as BTC, ETH, LTC, BCH, EOS, XRP), the trading time interval (shorter 1min, 3min, 5min, longer to 60min); then risk control, within the user's controllable risk range set the transaction amount, set The stop loss is set within the user's risk. Spebitcoinus will carry out technical analysis of the directional trend of the currency through its self-developed intelligent system, providing the basis for the user to accurately determine the direction of rise and fall, and place orders based on the analysis. After the order is placed, the system will automatically count down the time and automatically settle the profit and loss to the trading account after the specified time.

Spebitcoinus adopts new model, high-frequency trading, matching engine to support large data volume, high performance and high concurrency stably; adopts distributed architecture, quotes, deep data quickly launched, front-end firewall anti-attack mechanism, back-end stealthy separation deployment; adopts MD5+RSA (asymmetric encryption algorithm) to guarantee account password security, adopts OSS+CDN static file acceleration mechanism to ensure the security of data files. At the same time, it integrates five major systems, including trading system, financing system, investment system, tool system and expansion system, which gives the system powerful integration and expansion characteristics. With the support of strong financial strength and legal compliance operation, Spebitcoinus is making the profitability of users easier, faster and more efficient.

Spebitcoinus, which has been working in the field of contract exchanges for a long time, knows that "users are the first productive force in the development of the exchange" and has always aimed at "increasing the profitability of users" and "providing investors with convenient investment tools". The goal of Spebitcoinus is to "increase the profitability of its users" and "provide investors with convenient investment tools". In addition, Spebitcoinus uses the latest multi-factor security mechanism from the inside out, which provides a high level of security. It also has a self-developed high-speed transaction matching engine, which can carry tens of thousands of transactions per second and can meet the needs of users' transactions to the maximum.
