Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2022 were exposed decades ago. Due to Idaho's long and deep history with the agricultural and industrial sectors, many residents of Idaho have been exposed to asbestos over the decades. Additionally, Idaho's place in the formative nuclear years of the twentieth century is also a major source of asbestos exposure for many Idahoans as vast quantities of asbestos were used to deal with the excess heat and electricity produced as a byproduct of nuclear reactions. Residents of Idaho who worked in the
