We support our military veterans.

SLG

THE STEINBERG LAW GROUP

The Steinberg Law Group has decades of proven experience and the resources to help victims of asbestos exposure and their families obtain the financial compensation they deserve. All of it.

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians,

mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2022 were exposed decades ago.

www.mesotheliomaoptions.com/contact

Fortunately for residents of Nebraska, the state has no known naturally-occurring asbestos deposits. However, Nebraskans who worked in industries such as the military, power plants,

manufacturing and breweries are at an elevated risk of developing asbestos-related lung cancer or mesothelioma. In addition, asbestos-contaminated vermiculite from the notorious mine in Libby, Montana was processed in Omaha, Nebraska at the Western Mineral Products (purchased by W.R. Grace and Company in 1967) worksite starting in the 1940s and continuing into the late 1990s. www.mesotheliomaoptions.com/contact

We can help you find the top doctors and treatments from coast to coast.
