Root canal blocking materials are used in combination with solid filling materials or well-accepted hard materials to establish a complete seal in the root canal system. Sealants are adhesives used to fill the gap between the wall of the root canal and the filling material. They also fill breaches, holes, side channels and accessory channels. A good seal should create an airtight seal; ensure good adhesion between itself, the channel wall and the filling material; should be radiopaque; should not damage the dental structure; should be consistent; easy to mix and introduce into channels; will be easy to remove if necessary; is insoluble in body fluids; bactericidal or bacteriostatic; does not irritate the periradicular tissue; and should be slow to give work time.
