HealthTab™ is a turnkey point-of-care testing solution that combines best-in-class point-of-care technologies with a secure, cloud-based platform for tackling pressing global health issues. With just a few drops of blood from a finger prick, the system generates lab-accurate results on the spot and data is reported in real time. The test menu includes up to 23 key biomarkers for screening and managing chronic diseases, such as diabetes and heart disease (e.g., HbA1c, Lipid Profile, eGFR). HealthTab™ has also recently added capabilities for bacterial and viral tests, such as strep and COVID-19.

The HealthTab™ network model is unlike anything in

pharmacy today. It gives knowledgeable and trusted pharmacists a greater role in primary care delivery, while empowering patients to take more control of their health. It also reduces costs and waiting times and provides many potential revenue streams including equipment leasing & consumables, direct access testing, disease prevention & management programs, sponsored health programs, decentralized clinical trials, real world data (RWD) sets, and third-party app integration through API.
