The Steinberg Law Group has decades of experience in handling mesothelioma and other asbestos-related cases. With offices in New York, California and Texas, the Steinberg Law Group has a national footprint that helps win the best possible financial compensation for clients. www.mesotheliomaoptions.com/contact

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2022 were exposed decades ago. www.mesotheliomaoptions.com/contact

Although Arkansas has no naturally-occurring asbestos deposits, residents of the state can and have been exposed to asbestos at home and in the workplace. Citizens of Arkansas who worked in the mines, power plants and oil refineries are at an elevated risk of developing an asbestos-related illness. In addition, the University of Arkansas, Arkansas State College and the State Teachers College have all had issues with asbestos in their buildings.
