

# SDG Launches Integrated Cyber and Business Risk Management Service with Advanced Clinical Stage Biopharmaceutical Firm

NORWALK, CT, UNITED STATES, October 26, 2022 /EINPresswire.com/ -- [SDG](#), a global cybersecurity, identity governance, [GRC](#), risk consulting and advisory firm, announced today that it has implemented an integrated cyber security, risk, and compliance management solution with a New York based clinical-stage [biopharmaceutical](#) company.

The client needed an integrated software platform and service to manage their SOX business controls, cybersecurity controls, and IT operations. SDG delivered this comprehensive integrated service as a single pane of glass by utilizing its Network Operations Center (NOC) and Security Operations Center (SOC) services in conjunction with the SDG TruOps Cyber Risk SaaS platform.

“

We see this project as a milestone in SDG's ability to deliver real-time visibility of cyber risk, and more importantly real-time insight regarding the business implications of that risk.”

*Ajay Gupta*

This approach delivered exactly what the client needed – a holistic view of their security, risk, and compliance posture.

Comprised of tightly integrated modules, the TruOps Cyber Risk management platform is a flexible, easy-to-deploy and operate, cloud-based SaaS solution. TruOps reduces risk management complexity, streamlines the risk and compliance assessment process, and delivers comprehensive, real-time efficacy of controls across the internal organization and its extended third-party

environment.

Working closely with its biopharmaceutical client as a trusted advisor and technology-based managed services provider, SDG delivered a wide range of highly integrated cyber security and IT services:

- Management of the client's security controls and cloud technology infrastructure from SDG's global SOC and NOC
- Deployment and management of the client's Azure/Office 365 environment
- Implementation and, 24/7 monitoring of the client's cyber security controls
- The configuration, deployment, and security monitoring of network and end-user devices

As a result, the client can manage their SOX and cyber risk posture using a single platform, bridging the gap that has traditionally existed between risk management policies and the efficacy of controls, ensuring audit-readiness, regulatory compliance, and real-time awareness of business risk across the organization.

The client's Chief Administration Officer stated, "SDG has been a great technology and business partner helping us establish a robust technology network that links our business control framework with our regulatory and audit compliance. In addition, the SDG Security Operations Center provides 24/7 cyber security monitoring of our technology infrastructure...functionality vital to the protection and security of our advanced technology research and operational systems."

"We see this project as a milestone in SDG's ability to deliver operational IT security and regulatory compliance awareness, real-time visibility of cyber risk and, most importantly, real-time insight regarding the business implications of that risk," stated Ajay Gupta, President, and Chief Executive Officer of SDG.

#### About SDG

SDG is a global IT risk management and cybersecurity solutions provider. SDG services and SaaS solutions deliver a comprehensive range of identity, cybersecurity, GRCaaS, and cloud security capabilities that enable organizations to identify and mitigate cyber risk, protect cyber assets, and grow their business securely.
