

Intelfin Global – The ultimate Platform for Safely Investing in Digital Assets

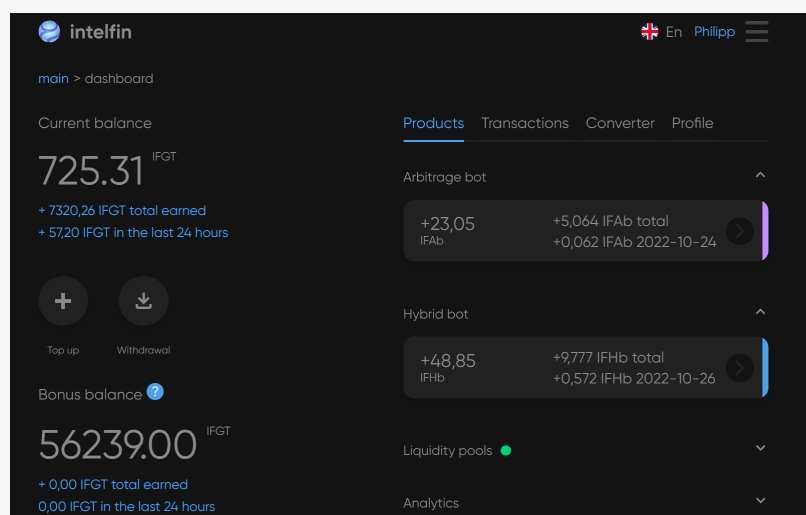

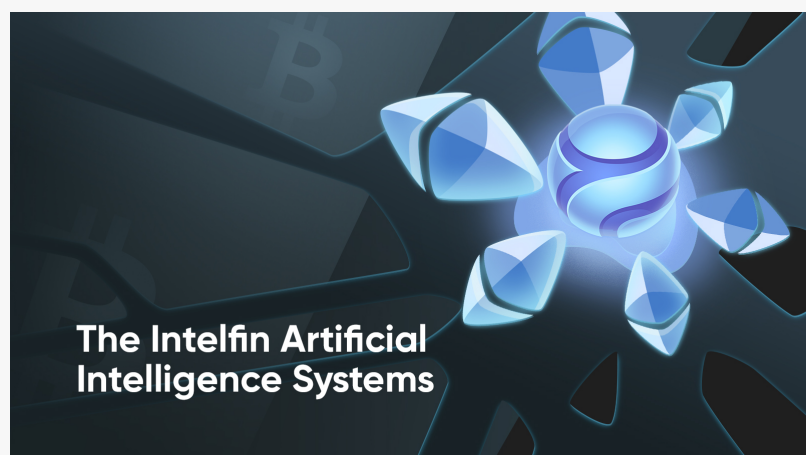

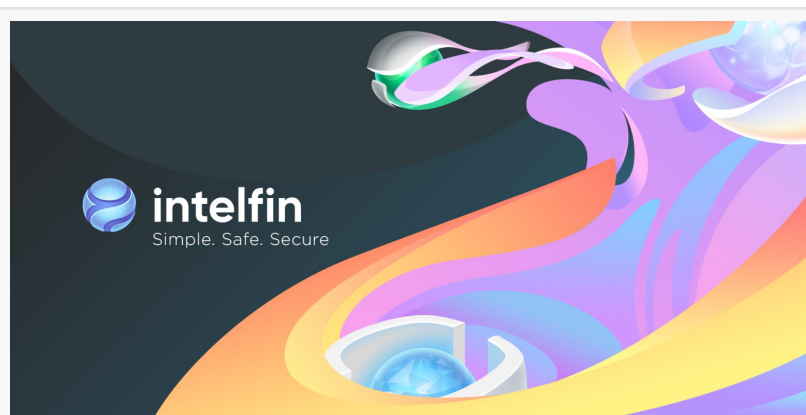

The Intelfin Global team developed AI systems with arbitrage and hybrid algorithms to enable you to invest safely in cryptocurrencies, NFTs, and more.

LONDON, UNITED KINGDOM, October 28, 2022 /EINPresswire.com/ --

Traditional banks or other mainstream financial institutions are no longer the best places to invest and increase your money if you want to invest and increase it safely. With the ever-rising inflation that is being documented in financial institutions throughout the world, having a bank account alone is not sufficient for maintaining your wealth. It is imperative that the money you invest continues to generate profits on a regular basis.

During the year 2022 alone, inflation rates have reached record levels, making it virtually impossible for anyone to store their wealth in the form of money (fiat currencies) and other non-appreciating assets. In most cases, investing involves actively buying and selling physical or digital assets, which requires considerable time and experience depending on the particular industry.

It is essential that the money you invest continues to generate profits on a regular basis. Besides ensuring the

safety of your funds, how can you increase your savings? Follow the example of [Intelfin Global platform](#) users who have already found the solution and look forward to the future with confidence.

Those who have enrolled on Intelfin Global are already earning up to 22.4% interest on their investment every month. You'll earn more depending on which from platform's product you choose, as we'll show you below. If you are interested in investing in digital assets and gradually growing your wealth, Intelfin Global is one of the best platforms to consider.

[Apart from its current products](#), which include Arbitrage Bot pools, Hybrid Bot pools, and Liquidity pools, Intelfin Global is working on several new developments. These products include Intelfin DAO, Intelfin NFT, Intelfin AI, Intelfin Staking, and Intelfin DEX decentralized applications.

It is important to focus on the fundamental direction of the ecosystem - Intelfin Trust, a decentralized insurance fund of Intelfin Global Group, which is valued at \$83 million USD as of 2022, and which protects the assets of ecosystem participants. Intelfin Trust was established by Intelfin Global Group in Q3 2018 to protect the interests of users and to maintain ecosystem stability. A 10% allocation of all trading commissions is made to the fund by Intelfin Global Multiplatform.

Intelfin Trust is an innovative network. These new developments will be integrated into an update that facilitates smart contract chain tokenization and deployment (including EVM and WASM compatibility) on the underlying protocol, unlocking previously unimaginable utility levels. These are the core system layers of ecosystem insurance that apply to the Intelfin Global platform and all future ecosystem projects. Moreover, users can find answers to their cryptocurrency questions in the company's extensive knowledge base.

About Intelfin Global

The Intelfin ecosystem (IFGT) is a decentralized ecosystem built on the internal tokens of each product/membership. The total value of which is expressed in the main internal token of the platform — \$IFGT.

In order to expand its capabilities and maintain its decentralized structure, Intelfin Global Group is currently developing its own layer 1 (L1) blockchain based on the Cosmos SDK.

Intelfin Global products

Investing in digital assets with Intelfin Global platform is possible using a variety of products based on the amount of capital and the investment objectives you have. Among these products are arbitrage bot pools, hybrid bot pools, liquidity pools, and analytics services.

Arbitrage bot

Among Intelfin Global's investment products, this one is the most profitable. With this product, you have the opportunity to earn up to 22.4% interest per month on your investment. Arbitrage

bot algorithms enable you to trade assets in fractions of a second, making a profit on the difference in altcoin prices between exchanges. There is an average rating of 4.7 stars for Intelfin Global's arbitrage trading bot. In other words, most users have benefited from using this product.

Hybrid bot

The hybrid bot uses several strategies to help you safely invest and gain from volatile cryptocurrencies liquidity. It uses high-frequency trading (hft) and fork-medium algorithms to scan the markets and find crossings of at least five buy/sell/hedge signals for a given instrument. Using this tool will give you an interest of up to 19.6% per month.

Using Intelfin Global's Hybrid bot comes with three main benefits: it significantly reduces the average value of the asset, insures your assets against sharp declines, and also insures against loss in the future. Overall, this tool gets 4.5/5 stars from users, so it's pretty good.

Liquidity Pools

With liquidity pools, market participants store their assets to collectively provide a sufficient liquidity cushion for anyone wishing to exchange a particular asset. Liquidity pools are the only Intelfin Global tool with a fixed yield up to 14% per month.

The Defi specialists at Intelfin have developed three liquidity pool solutions you can invest in. These include:

- Single Asset: This option requires an initial balance of 300 USDT in order to earn a fixed income of 8% per month as an automated market maker (AMM).
- Multi-Asset: This allows you to activate three liquidity pools with an entry balance of 300 USDT for each pool and get a stable income of 10% per month on your investment.
- Diversified Asset: For this offer, you will need 3000 USDT, and the algorithm will distribute your assets among at least ten different pools. A stable monthly income of 14% will be provided by this offer.

Intelfin's AI Analytics. Free & Custom service

To help its users make the best investment decisions, Intelfin Global uses cutting-edge technologies, such as machine learning and deep learning, to analyze different segments of high-yield markets, such as cryptocurrencies, stocks, commodities, and currency pairs. It's certain that if you're using any of these investment tools, you'll need to look at the analytics data generated by Intelfin AI neural networks.

The Intelfin Ecosystem has received accolades such as "Trusted Vendor," "Top Performer," "Fall 2022 Leader," and "User Awards" from Sourceforge, as well as the "Users Love Us" banner from Slashdot.
