

# HealthBanks Confirms Research Showing Cancer Patients Responded to CAR T-cell Therapy 90% of the Time

*According to a recent CBS News report, medical science is undisputable: banking immune cells ultimately saves lives!*

IRVINE, CALIFORNIA, UNITED STATES, October 27, 2022 /EINPresswire.com/ --

The future of health is limitless & filled with innovation. A globally respected example of that is [HealthBanks](#), world-renowned for advancements in stem cell research within the cell & gene therapy industry. The establishment of the HealthBanks network was the result of the vision that affordable & accessible cell & gene therapies would redefine modern medicine.

HealthBanks, headquartered in Irvine, California, has a distinguished global reputation for the development of cell-based therapies to identify better treatments for various diseases.

Increasingly, the research underscores the health benefits & value of harvesting & preserving one's immune cells from their own blood as a way to treat & cure future diseases.

Cancer.org estimates that 1 in every 3 Americans will develop cancer at least once during their life. According to [MedicalNewsToday.com](#), statistics show that in the US, 1 in 2 women will develop cancer while 1 in 3 men will. While these statistics are staggering there are now anti-cancer treatments that use a patient's own immune cells as personalized medicine to fight against the cancer cells.

One such treatment, known as Chimeric Antigen Receptor T-cell therapy (CAR T-Cell Therapy), is currently FDA-approved for B-cell lymphoma & other blood cancers.

A recent segment of CBS Sacramento news station featured the Chairman & CEO of HealthBanks & ThermoGenesis, Dr. Chris Xu, who highlighted the latest progress & technology in the transformational field of immune cell banking. The CBS report mentioned recent research results showing that immune cells are a strong weapon in the fight against some life-threatening diseases, such as cancer, & outlined some of the latest breakthroughs in immune cell banking.

The results are exciting including research that shows patients responding to CAR T-cell therapy 90% of the time! The research also shows that saving immune cells has the potential to save lives. Now & looking forward to next 10-20 years, a person's own immune cells could be a strong weapon to fight against life-threatening diseases.

HealthBanks is at the forefront of this effort as being recognized as the only dual stem cell & immune cell banking service provider in the US. HealthBanks utilizes state-of-the-art automated technology to increase access to & affordability of these life-saving treatments in the future. HealthBanks specializes in processing & preserving stem cells from newborn umbilical cord blood & has added adult immune cells banking services to its capabilities which sources immune cells from a patient's own peripheral blood. The recent CBS segment quoted medical researchers emphasizing the vital importance of cell banking as a key to the future of health.
