Medical Devices market

Urinary incontinence is a very common problem that can be embarrassing. Millions of women suffer from it, but older women are more likely to experience it. There are many types of UI. The most common type is stress incontinence. This occurs when the muscles supporting the bladder become weaker or damaged.

To help with UI, there are many options for urinary incontinence products. A pad or lining, which is placed inside your underwear to absorb urine leaking, is the most basic device. Belts and other support clothing are more sophisticated and hold the pads in place, preventing leaks. Catheters, which are tubes that are inserted into the bladder to allow urine and water to drain into a bag, are also used by some women.
