This family-owned foundation, The GL Hunt Slab Repair company is focused on making the foundation and slab repair process as smooth and easy as possible.

What causes foundation and slab failure in San Antonio Texas?

Foundation and Slab failure in Texas is typically caused by water, sometimes large volumes of water can cause foundation failure, or in the case of a drought, not enough water can cause slab and foundation cracks. The Texas soil is known for producing harsh environments for house foundations and slabs. The sand, clay, and rocks can get very hot and then dry quickly, this tends to shrink which then can develop cracks that do not adequately support the weight of the homes on the foundations and slabs, this leads to foundation and slab settlement. Texas is known for its droughts that cause the soil to shrink and disconnect from the foundations and slabs of houses. This also can lead to the creation of holes and gaps between the ground and the slabs. This removes the natural soil between the ground and the

foundation of the house which can lead to cracks and failure of the slab. fractures will begin to form and increase as gravity continues to push the weight of your home down onto the pockets or gaps that are created but the shrink and erosion of ground.

What Texas Counties are affected by the drought of 2022?

The following Texas Counties have been added to the affected drought areas of Texas for the
