Ship Building And Repairing Market Trends

To reduce environmental threats, key players in the industry are providing environmentally friendly ship repair and maintenance services. One of the emerging trends is the replacement of the traditional approach of shot blasting machines used to strengthen, clean, or polish any metal surface or metal, by ultra-high-pressure water blasting systems. Shot blasting uses abrasive materials to clean the surface of the ships which are hazardous to environment, whereas water

blasting doesn't use any kind of abrasive material, it just uses a stream of water with high pressure to clean the internal and external parts of the ship. Water blasting has many environmental benefits, it has the ability to recapture the water and reuse it thus reducing waste.

Ship Building And Repairing Market Overview

The ship building and repairing market consists of sales of ships and ship building and repairing services by entities (organizations, sole traders and partnerships) that are engaged in operating shipyards. Shipyards are fixed facilities with dry-docks and fabrication equipment capable of building a ship, defined as watercraft not typically suitable or intended for personal or recreational use. Ship building, which is also referred to as ship construction, includes the construction of ships, their repair, conversion and alteration, the production of prefabricated ship and barge sections, and specialized services, such as ship scaling.
